

Seminar on East-Asia Earthquake Studies

Earthquake, Tsunami and Volcano in Northeast
Asia: International Collaboration and Regional
Capacity Building for the Forecast, Preparedness
and Early Warning

October 19-21 2011, Beijing
Organized by
China Earthquake Administration
Japan Meteorological Agency
Korea Meteorological Administration
first circular

This Seminar firstly acts as a scientific response to the March 11, 2011, Great East Japan Earthquake, as proposed by leaders during the 2011 Tri-lateral Summit.

The scope of the meeting also includes, but not limited to, the hot-spot scientific issues such as the joint study of the 2008 Wenchuan earthquake, the joint research on volcano, such as the Baitou Mountain Volcano, and induced disasters by earthquakes.

The Seminar mainly invites policy-making-related experts in China, Japan, and Korea, while open to scientists and engineers all over the world, especially in the three countries, in other northeastern Asian countries, and the ASEAN countries.

Besides the scientific and technical exchanges and policy-making-related discussion, the outcome of the Seminar will be utilized to facilitate disaster preparedness actions in the countries.

Funding is available based on application.
